

DATA TALENT FOR YOUR ORGANISATION

Put trained data and AI talent to work on a real challenge

Host the final practical assignment of an Amsterdam Data Academy programme. A trained professional works on a genuine data or AI question of yours, with a concrete result in 5 to 8 weeks, at no cost to your organisation.

01

WHY HOST

Why companies host a final assignment

Instead of a textbook exercise, our participants apply everything they have learned to an actual business problem in your organisation.

REAL RESULT

Impact on a real question

A trained professional tackles your data or AI challenge and delivers a concrete, usable outcome, not a demo.

GET TO KNOW TALENT

A low-risk look at a future hire

See how someone works, thinks and fits your team over several weeks, on real work, with no obligation.

FRESH THINKING

Fresh perspective and methods

Ambitious, practice-oriented talent brings new ideas and up to date data and AI methods into your team.

GUIDED BY US

You do not carry the coaching

The participant is coached by our subject instructors throughout, so the technical supervision stays with us.

Free to host, and the results are yours. There is no fee to host a final assignment, and the deliverables the participant produces, from code and models to analyses and reports, belong to your organisation.

2,500

professionals trained across 7 years of bootcamps

NLQF 6

comparable to bachelor level

02

TWO TRACKS

What a participant can do

Participants are trained across two tracks. Depending on their focus, this is the kind of outcome they deliver for you.

Data track

Data analytics, data science and data engineering.

- A Power BI dashboard that turns raw operational data into prioritised recommendations
- A Python analysis or predictive model that answers a specific business question
- An automated data pipeline that removes manual, repetitive work
- A data quality and structure improvement project

AI track

Applied AI and AI engineering.

- An AI assistant or agent that supports a real task in your workflow
- A retrieval based (RAG) solution that answers questions over your own documents
- AI driven process automation that saves your team time
- A proof of concept that shows where AI adds value

Works with what you already have. Our training is technology agnostic, so it fits your tools and data. Public sources such as CBS work just as well, and in practice anything can start from a clean dataset in Excel.

“

One clear deliverable, scoped in writing in the first week.

PROOF

Example assignments

A few examples of the concrete work participants have delivered.

PREDICTIVE MAINTENANCE

Port of Rotterdam

A predictive maintenance model that supports smarter, more efficient asset management and less unplanned downtime.

OPERATIONAL DASHBOARD

From spreadsheets to insight

Scattered spreadsheets turned into one live Power BI dashboard with prioritised actions for the team.

DATA PIPELINE

Automating manual work

An automated pipeline that replaces hours of manual data preparation each week.

AI DOCUMENT ASSISTANT

Answers in seconds

A retrieval based assistant that lets a team find answers in internal documentation in seconds.

PUBLIC DATA ANALYSIS

Benchmarking with CBS data

Combining your own data with public sources such as CBS to benchmark performance in your market.

Real work, not a demo. Every assignment works towards one clear deliverable your team can keep using after the final presentation.

04

THE JOURNEY

How it works

Your 5 to 8 week practical assignment journey, from first conversation to final presentation.

1 **Intake**

We discuss your challenge together and agree what a good outcome looks like.

2 **Match**

We connect you with a participant whose skills and background fit your question.

3 **Kick-off**

Together with your point of contact, the participant defines the business problem and fixes the scope in writing in the first week.

4 **Delivery**

5 to 8 weeks of focused work towards one clear deliverable, with a mid-term check-in and guidance from our subject instructors.

5 **Final presentation**

The participant presents the results and recommendations to your team.

Duration and format

5 to 8 weeks, roughly one or two days per week. On site, hybrid or fully remote, whatever fits your team best.

What we ask of you

- A real challenge worth solving
- A point of contact who supervises and is reachable
- Timely access to the relevant data

Guidance is on us. Our subject instructors coach the participant on the content for the full assignment. Your team only provides context and a point of contact, we handle the technical supervision.

05

MEET YOUR NEXT HIRE

A natural way to meet your next hire

A final assignment is one of the most relaxed ways to get to know talent before you hire. You see how someone works, thinks and fits your team over several weeks, on real work, with no obligation.

Many of our participants are career changers and graduates who are actively looking for their next step, so hosting an assignment puts you first in line. If there is a match, you can offer a position with confidence, because you already know what they deliver.

LIMITED OPPORTUNITY

Secure your place for the next intake

We open only a small number of assignment places each month and select our partner organisations per intake. Once the places for an intake are filled, the next opportunity is the following month. If you have a challenge in mind, register your interest now.

2,500	7 yrs	NLQF 6	CRKBO
professionals trained	of bootcamps	comparable to bachelor level	& NRTO accredited

Register your interest

Tell us about a challenge in your organisation and we will explore whether there is a fit. The first conversation is free and without obligation, and hosting itself is free as well.
